Management Level Milk allows the comparison of daily milk production for individual cows or groups of cows in different lactations and stage of lactation. It adjusts the cow's test-day production up to 305-days to the middle (150-days) of lactation and standardizes milk pounds to 3.5% fat and 3.0 % protein.

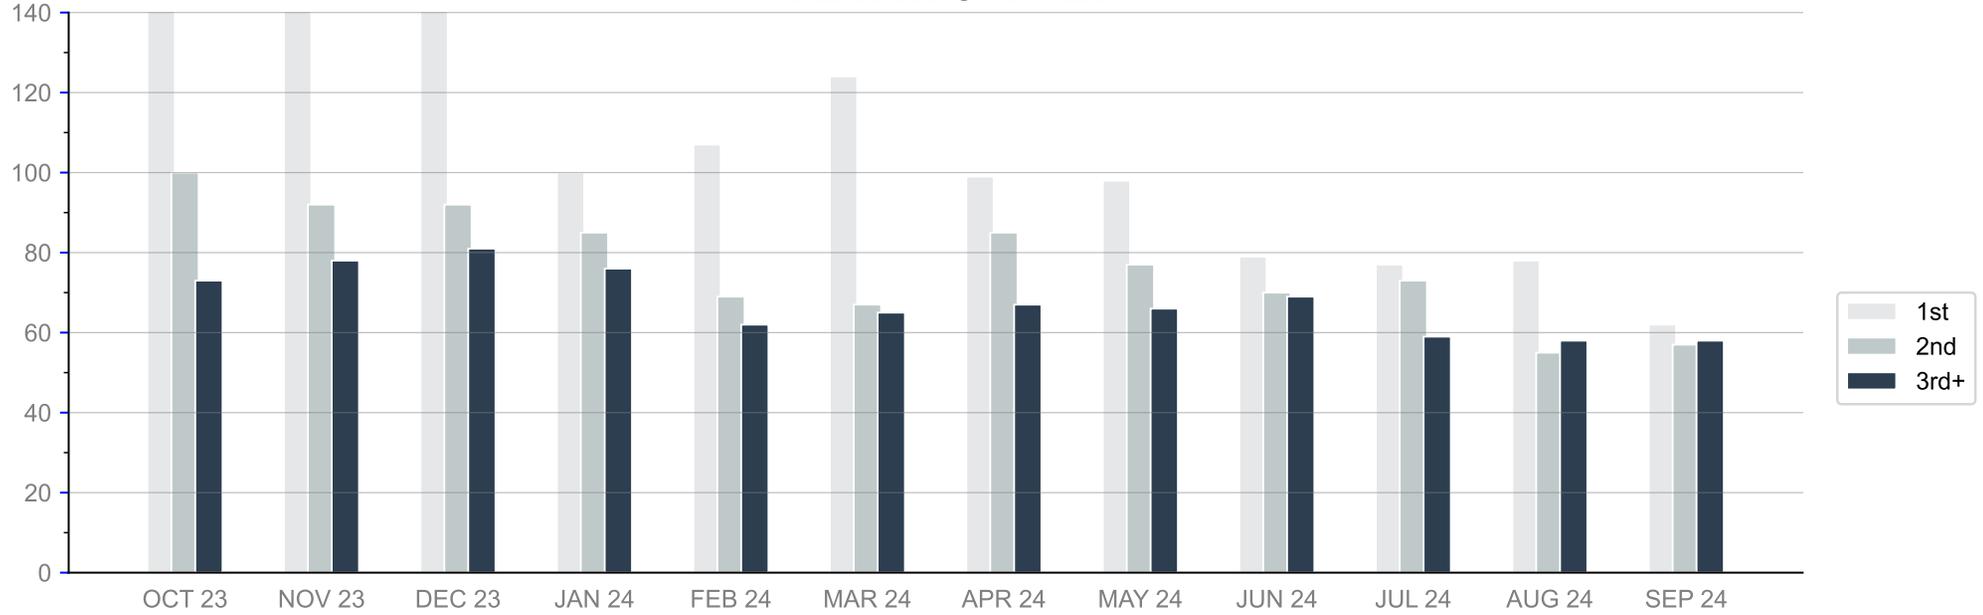

Persistency is an indication of how a cow or a group of cows conform to a standard lactation curve. Positive values indicate that the production exceeds those that are normally expected. Conversely, negative values result from animal(s) that do not produce to the standards of a normal lactation curve.
